EDUCATION

B.Tech in Computer Engineering (IoT, Cybersecurity & Blockchain Technology) **2024 – 2028**
Shri Shankaracharya Technical Campus, Bhilai

Relevant Coursework: Computer Networks, Operating Systems, Cybersecurity, Information Security

TECHNICAL SKILLS

Security Operations: Splunk, Elastic Stack, Sigma Rules, MITRE ATT&CK, Incident Response, Threat Detection

Cybersecurity: OWASP Top 10, Vulnerability Assessment, Web Penetration Testing, Reconnaissance, CVSS Scoring, Responsible Disclosure

Security Tools: Burp Suite, Nmap, Metasploit, OWASP ZAP, Gobuster, Nikto

Programming: Python, Flask, C, C++, HTML, CSS

Platforms & Technologies: Docker, Kali Linux, Ubuntu Server, DVWA, OWASP Juice Shop, NVD API, OpenRouter

AI Automation: Workflow Automation, Prompt Engineering, AI Agents, Business Process Automation

PROFESSIONAL EXPERIENCE

Security Researcher — *Bugcrowd* **Jun 2025 – Present**

- Conducted manual web application penetration testing across 4 bug bounty programs using Burp Suite and web security tools.
- Identified and submitted 3 valid security vulnerabilities with remediation recommendations under responsible disclosure.

AI Automation Intern — *Bharat AI Vyapari* **Apr 2026 – Jun 2026**

- Designed and implemented AI-powered workflow automations across 10+ business processes, reducing manual effort by 60–70%.
- Developed prompt engineering strategies and evaluated AI tools across 5 use cases to improve automation quality and reliability.
- Tested automation workflows, identified bottlenecks, and optimized solutions for scalable business operations.

Cyber Security Intern — *Cryptonic Area (Remote)* **Feb 2026 – Mar 2026**

- Developed SOC-style security tooling and automated reconnaissance workflows using Python and offensive security techniques.
- Performed OWASP Top 10 vulnerability assessments against DVWA and OWASP Juice Shop, documenting 2–3 findings with remediation recommendations.

PROJECTS

N8N CVE Reports | *n8n, NVD API, OpenRouter LLMs, GitHub* **2026**

- Built a fully functional automated vulnerability intelligence pipeline retrieving CVEs from the NVD API and categorizing them by CVSS severity.
- Integrated OpenRouter LLMs for vulnerability impact analysis and mitigation recommendations, with automated daily Markdown report generation and GitHub archival.

Vulnerability Research & Reporting System (VRRS) | *Docker, Python* **2026**

- Built Docker-based vulnerability labs using DVWA and OWASP Juice Shop; developed Python scanners, fuzzers, and CVSS-oriented vulnerability reporting templates.

SOC-in-a-Box — Security Monitoring Lab | *Splunk, Elastic, Sigma, MITRE ATT&CK* **2026**

- Simulated enterprise SOC pipelines for log ingestion, threat detection, and incident response; authored Sigma rules, Splunk SPL queries, and Elastic detections mapped to MITRE ATT&CK.

Cybersecurity Homelab — Attack & Defense Lab | *Kali Linux, Docker, Burp Suite* **2024**

- Built a Kali Linux vs Ubuntu Server lab using Docker, DVWA, and OWASP Juice Shop; performed penetration testing using Burp Suite, Nmap, and Metasploit.
