Education

B.Tech in Computer Engineering (IoT, Cybersecurity & Blockchain Technology) 2024 – 2028

Shri Shankaracharya Technical Campus, Bhilai

Relevant Coursework: Computer Networks, Operating Systems, Cybersecurity, Information Security

Technical Skills

AI Automation: Workflow Automation, Prompt Engineering, Business Process Automation, AI Agents, AI Tool Research

Cybersecurity: OWASP Top 10, Vulnerability Assessment, Web Penetration Testing, Threat Detection

Security Operations: SIEM, Splunk, Elastic Stack, Sigma Rules, MITRE ATT&CK, Incident Response

Security Tools: Burp Suite, Nmap, Metasploit, OWASP ZAP, Gobuster, Nikto

Platforms: Docker, Kali Linux, Ubuntu Server, DVWA, OWASP Juice Shop

Programming: Python, Flask, C, C++, HTML, CSS

Experience

AI Automation Intern — Bharat AI Vyapari Apr 2026 – Jun 2026

- Designed AI-powered workflow automation solutions for business process optimization across multiple operational use cases.
- Developed prompt engineering strategies and evaluated AI tools to improve automation quality and workflow efficiency.
- Conducted automation system testing, identified workflow bottlenecks, and contributed to scalable AI-driven business automation initiatives.

Cyber Security Intern — Cryptonic Area (Remote)

Feb 2026 – Mar 2026

- Developed SOC-style security tooling and automated reconnaissance workflows using Python and offensive security techniques.
- Performed vulnerability assessments against intentionally vulnerable applications aligned with OWASP Top 10 methodologies.

Security Researcher — Bugcrowd

Jun 2025 – Present

- Conducted manual web application penetration testing across bug bounty programs.
- Reported security vulnerabilities with remediation recommendations following responsible disclosure practices.

Cybersecurity Volunteer — HackerHub8 Company LLP

Oct 2025 – Present

- Supported vulnerability analysis, security awareness initiatives, and cybersecurity community activities.

Projects

Vulnerability Research & Reporting System (VRRS) 2026

- Built Docker-based vulnerability laboratories using DVWA and OWASP Juice Shop.
- Developed Python-based scanners, fuzzers, and CVSS-oriented vulnerability reporting templates.

SOC-in-a-Box — Security Monitoring Lab

2026

- Simulated enterprise SOC pipelines for log ingestion, threat detection, and incident response.
- Authored Sigma Rules, Splunk SPL queries, and Elastic detections mapped to MITRE ATT&CK.

SecureTodo — Secure Flask Application

2026

- Built a secure Flask application hardened against OWASP Top 10 vulnerabilities.
- Implemented PBKDF2 password hashing, secure session management, SQL injection protection, and XSS mitigation.

Cybersecurity Homelab — Attack & Defense Lab

2024

- Built a Kali Linux vs Ubuntu Server attack-defense laboratory using Docker, DVWA, and OWASP Juice Shop.
- Conducted penetration testing using Burp Suite, Nmap, and Metasploit while documenting findings in professional reports.

Certifications & Training

- Internship Completion Certificate — AI Automation Intern, Bharat AI Vyapari (2026)
- Cyber Security Internship — Cryptonic Area (2026)
- ISO 27001 Foundation — Information Security
- IBM Cybersecurity Fundamentals
- Cisco Ethical Hacker
